

Firebase

1. Open [Firebase](#) → Go to console.

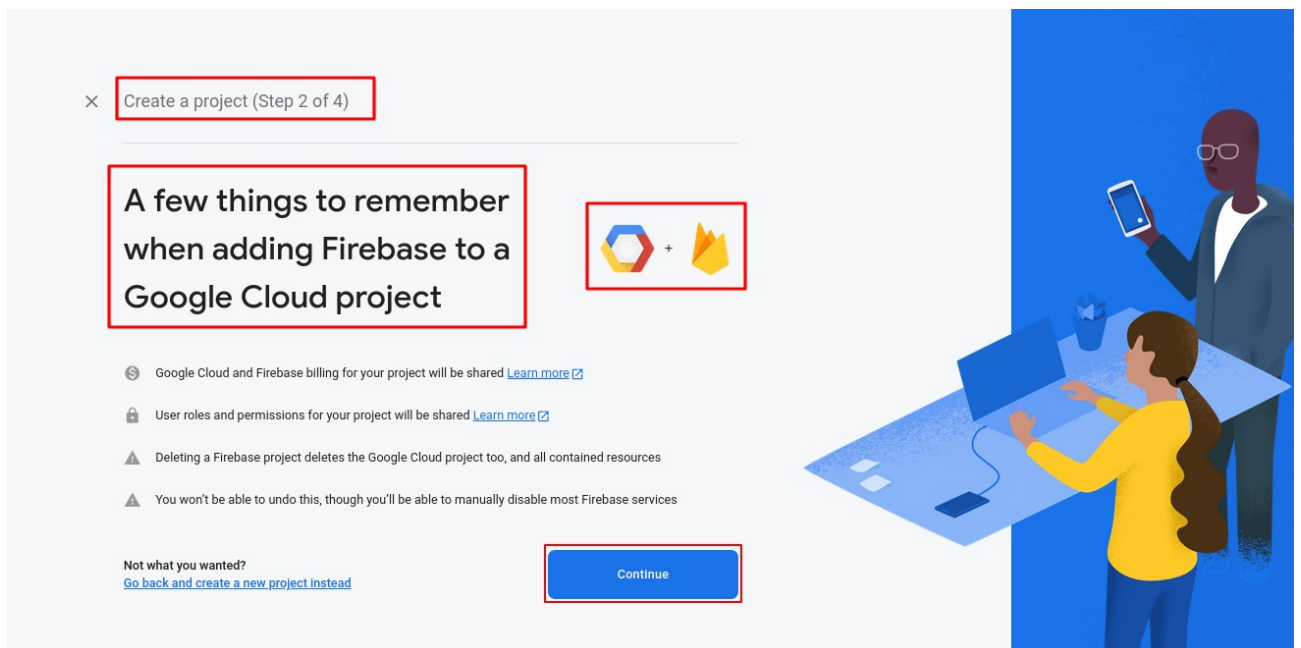

2. Create new project.

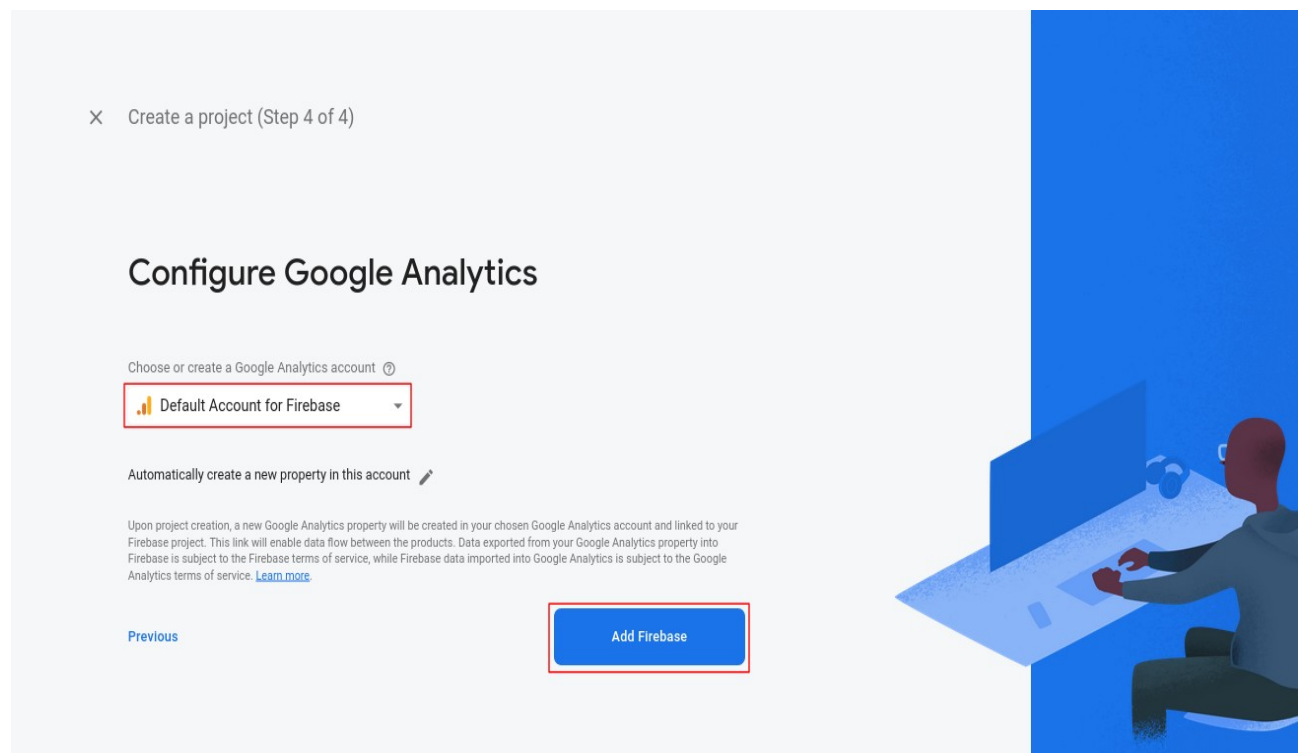

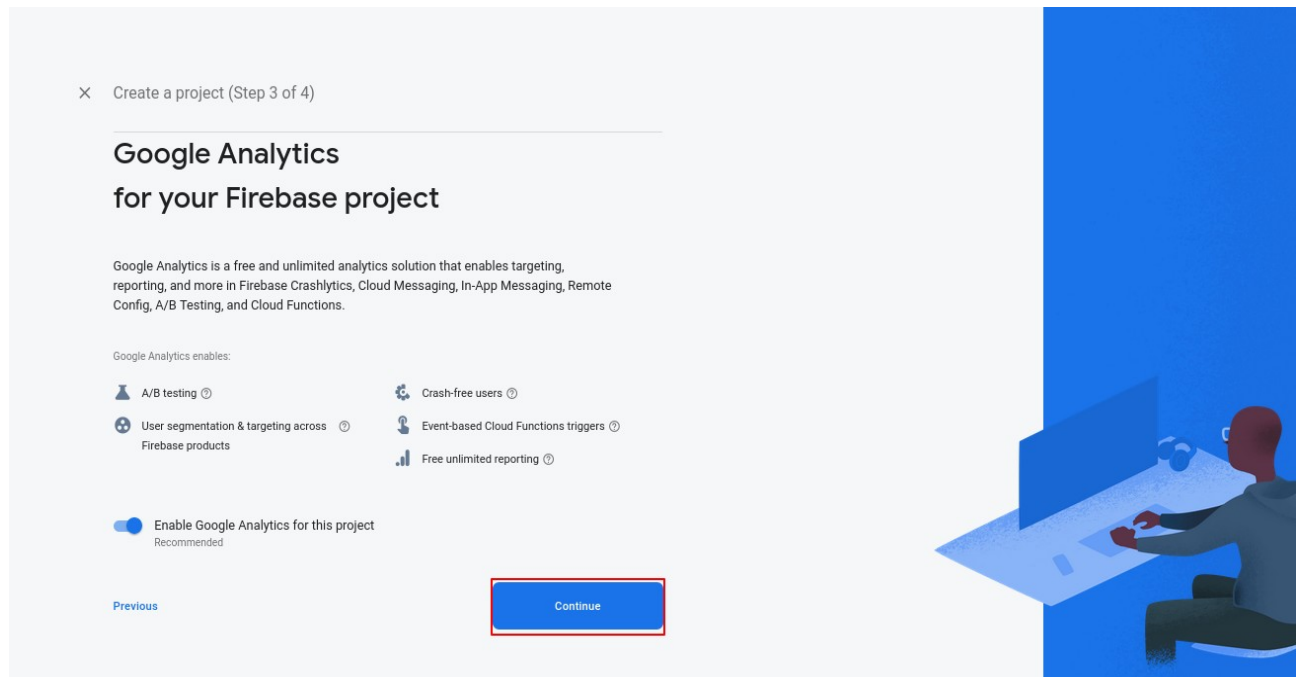

3. Enter project name

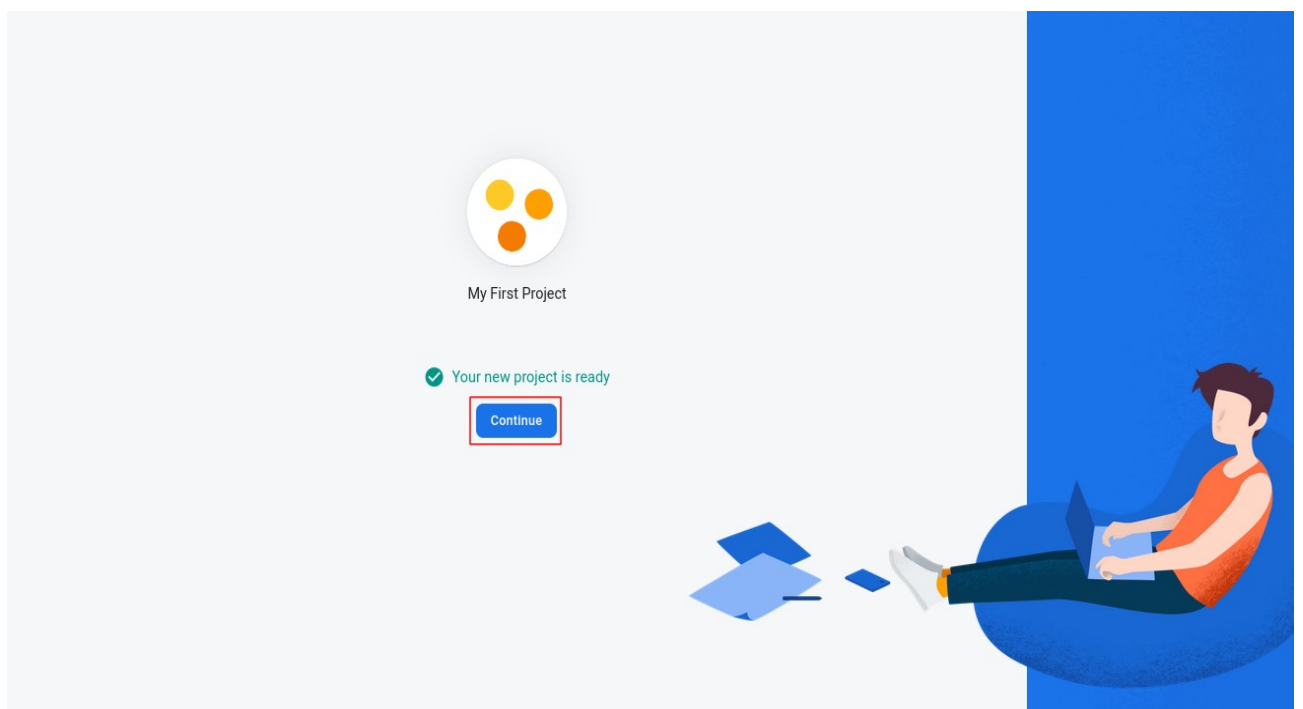

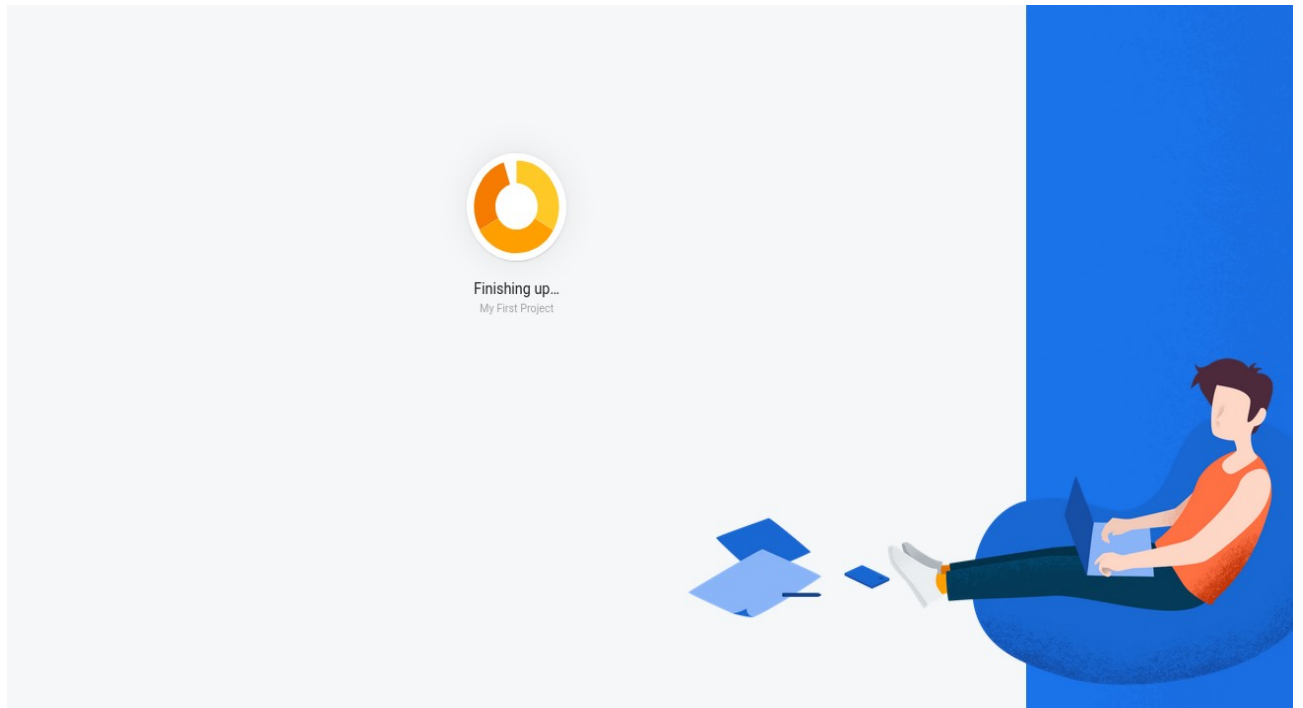

4. Adding Firebase to a Google Cloud project.

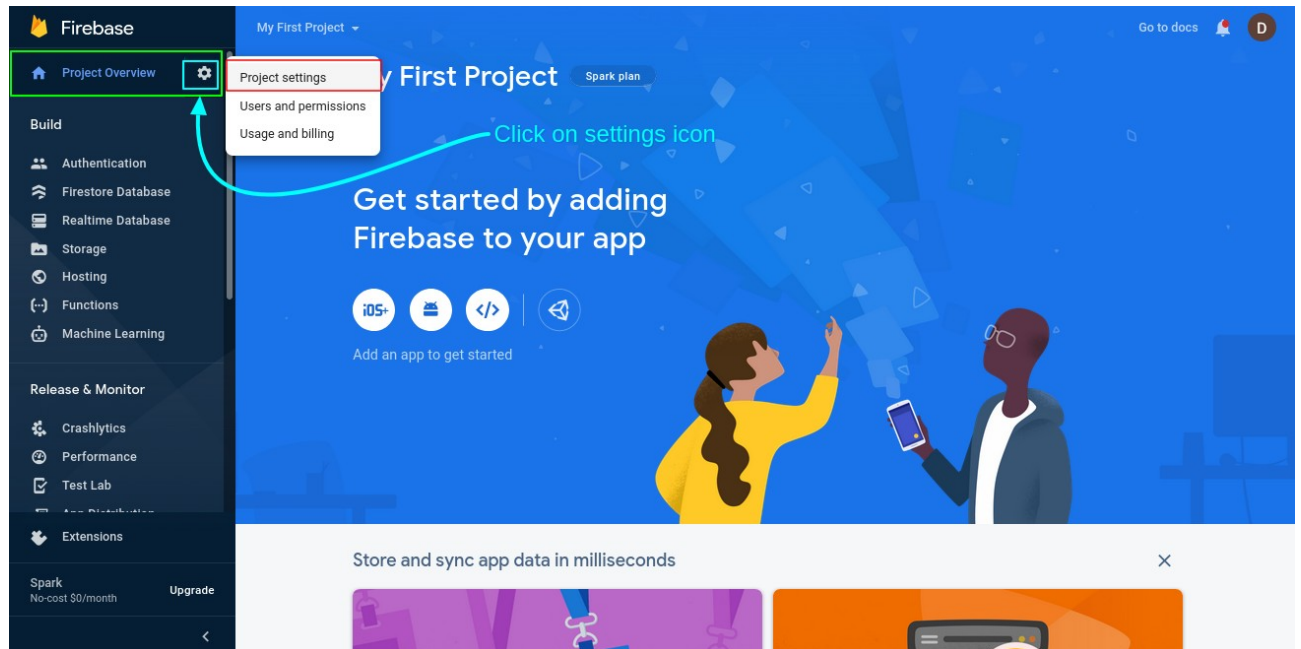

5. Enable Google Analytics for your project

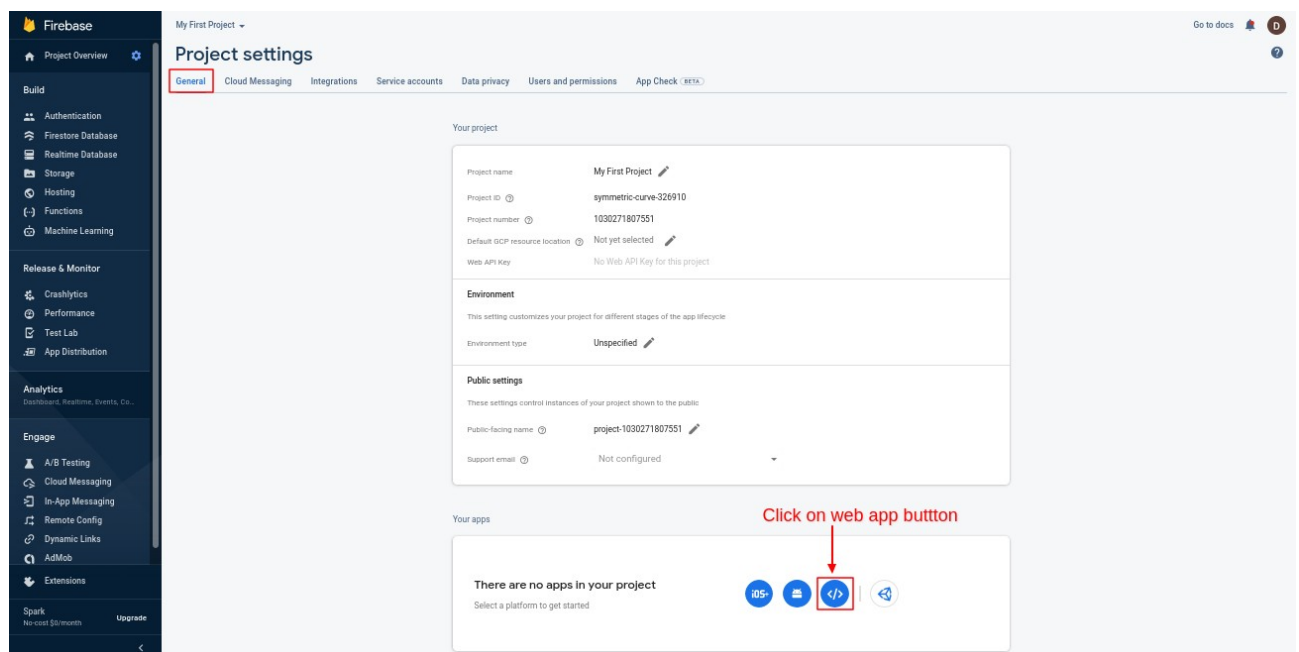

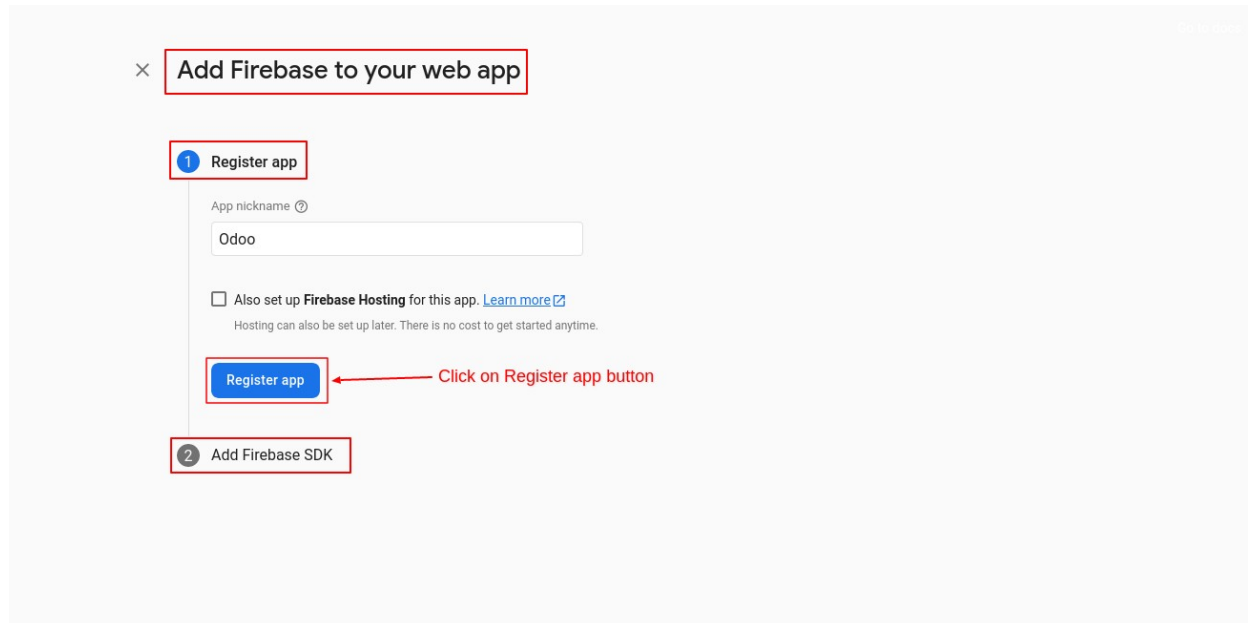

6. Click on settings icon → Project settings

7. Project settings → General

8. When you click on the web app button, it will open "Add Firebase to your web app" page.

× Add Firebase to your web app

1 Register app

App nickname ⓘ

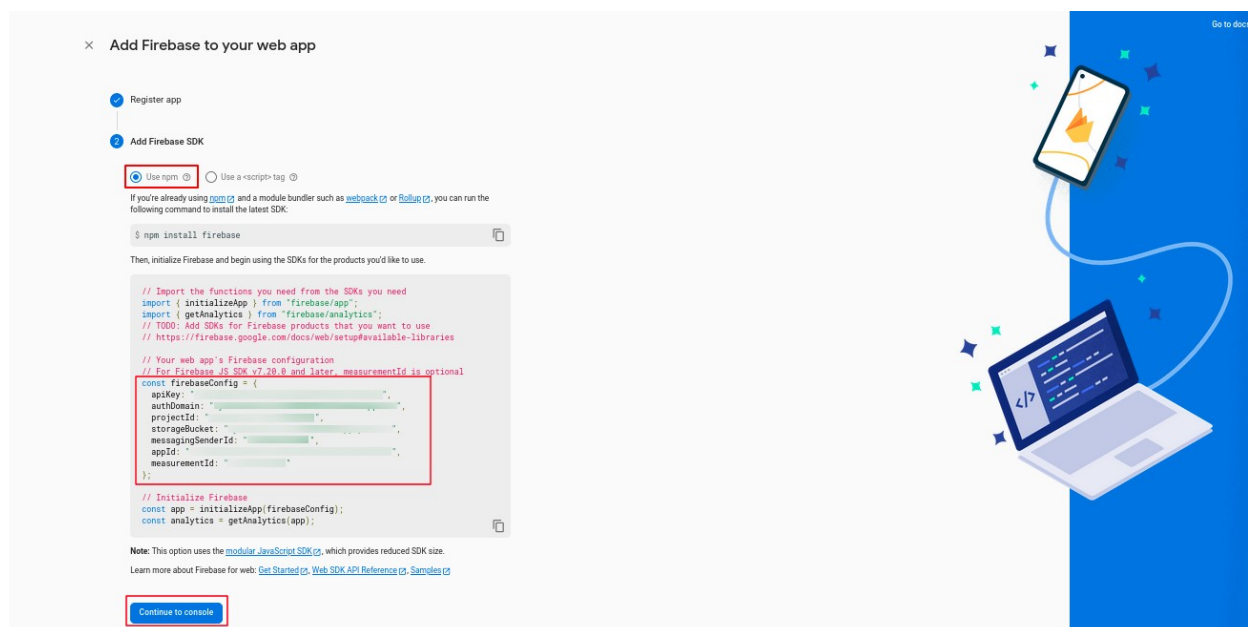

Odoo

☐ Also set up **Firebase Hosting** for this app. [Learn more](#) ⓘ

Hosting can also be set up later. There is no cost to get started anytime.

Register app

2 Add Firebase SDK

× Add Firebase to your web app

1 Register app

2 Add Firebase SDK

☒ Use npm ⓘ ☐ Use a <script> tag ⓘ

If you're already using [npm](#) ⓘ and a module bundler such as [webpack](#) ⓘ or [Rollup](#) ⓘ, you can run the following command to install the latest SDK:

```
$ npm install firebase
```

Then, initialize Firebase and begin using the SDKs for the products you'd like to use.

```
// Import the functions you need from the SDKs you need
import { initializeApp } from "firebase/app";
import { getAnalytics } from "firebase/analytics";
// TODO: Add SDKs for Firebase products that you want to use
// https://firebase.google.com/docs/web/setup#available-libraries

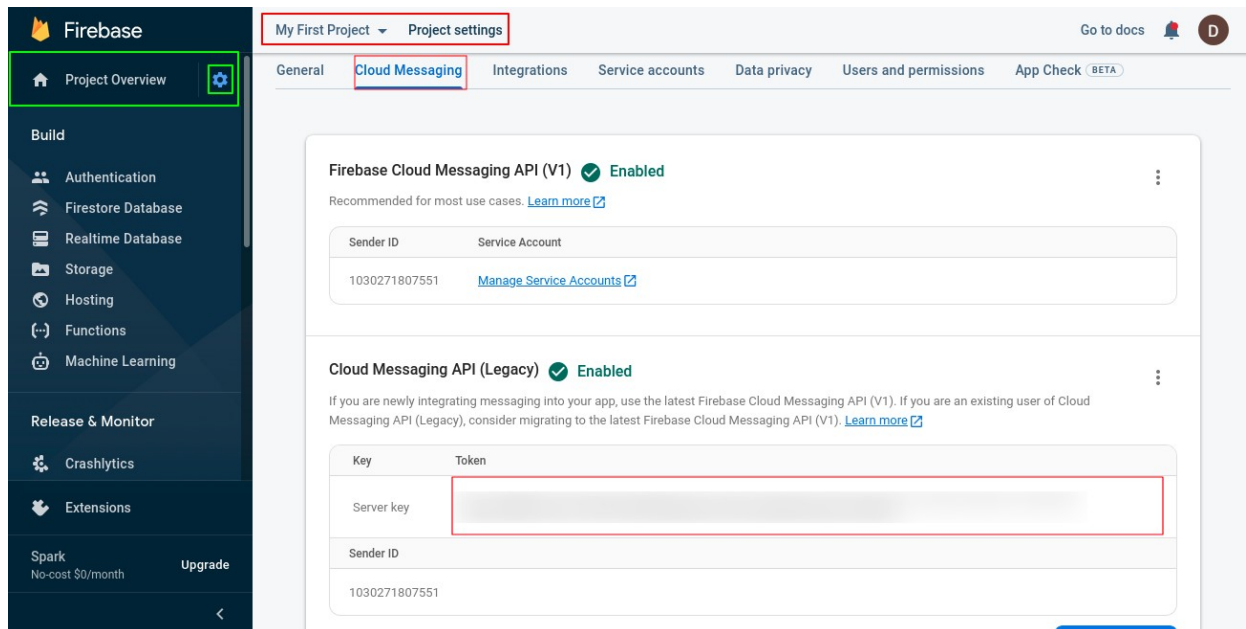

// Your web app's Firebase configuration
// For Firebase JS SDK v7.20.0 and later, measurementId is optional
const firebaseConfig = {
  apiKey: "AIzaSyA...",
  authDomain: "...",
  projectId: "...",
  storageBucket: "...",
  messagingSenderId: "...",
  appId: "...",
  measurementId: "G-..."
};

// Initialize Firebase
const app = initializeApp(firebaseConfig);
const analytics = getAnalytics(app);
```

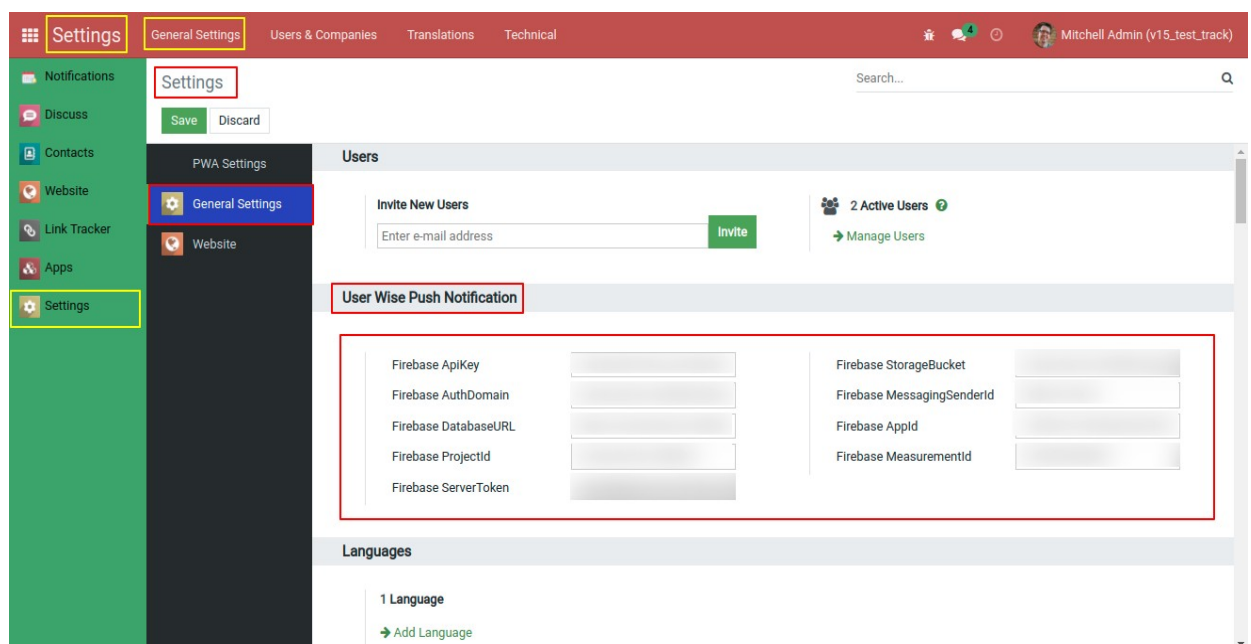

Note: This option uses the [modular JavaScript SDK](#) ⓘ, which provides reduced SDK size.

Continue to console

9. Click on settings icon → Project settings → Cloud Messaging

10. Set all the following API keys and Server key from your firebase project API keys and Server token sections.

Thank you!
